

Pro M Manual Coating Troughs

The Pro M manual coating troughs combine accurate, consistent performance with economy. Lightweight and easy to control, they can be used with any liquid emulsion to produce evenly coated screens. A dual-edge feature provides two coating options within one trough—the round edge is designed for quick buildup of the correct emulsion thickness using a minimum number of passes, and the sharp edge is designed for applying thinner deposits and face coats.

Pro M Coater Feature

- Convenient to use
- Large emulsion reservoir
- Angled plastic end caps
- One piece aluminum alloy construction
- Opaque emulsion cover and edge protector

Pro M Coaters are available in standard sizes from 2 inches to 144 inches (2 inch increments), but custom lengths are available. Contact your Sefar Sales Representative for more information.

Round edge for build up

Sharp edge for face coats
