

Entering the Direct-To-Film transfer printing space has never been easier!

Entering the Direct-To-Film transfer printing space has never been easier - or more affordable - than right now. Texsource's new 2-Head DTF printing package includes everything you need to launch your new digital printing venture or upgrade your existing operation.

PACKAGE FEATURES

Dual Printheads: Equipped with two Epson i3200 printheads, the system delivers impressive printing speeds of up to 129 square feet per hour. The dual-printhead configuration is easier to calibrate, operate and maintain than quad-head designs.

Intelligent Touch Screen Controls: The oven features easy-to-use controls and an automatic powder recycling system for effortless operation.

Single Stage Infrared Oven: A powerful IR oven ensures full and consistent curing, enhancing the quality of your prints.

Optimized Texsource DTF Inks: Effortless loading of CMYK and White inks simplifies the printing process.

CADLink RIP Software: Industry-leading CADLink RIP software provides advanced color management, multi-file support, and ease of use to allow you to produce vibrant and accurate digital transfers. The user-friendly interface, automated job management, and customizable print settings make printing high-quality transfers as easy as pressing a button.

On-Site Installation and Training: Texsource personnel provides complete installation support for your DTF printing system, including assembly, setup, software installation, color calibration, and training on printer usage and maintenance.

Startup Consumables: The kit includes the necessary CMYK and white inks, films and adhesive powder to begin immediate printer testing and printing.

- 2-Head DTF Transfer Printer, Infrared Oven and automatic powder recycling system
- 4 Liters of CMYK Inks
- 1 Liter of White Ink Maintenance Kit
- Two day, on site, installation and training by Texsource personnel
- Adhesive Powder & Film
- Intel i5 Laptop Pre-Installed CADLink RIP Software
- Digital Video Support Course

Our package makes it easy to take advantage of the game-changing capabilities of DTF transfer printing systems. You can produce high-definition, durable prints for multiple substrates including cotton, poly and blended fabrics.

Finished prints can be quickly and easily applied with a simple heat press, and the finished product is durable and resistant to wear and washing. Direct-to-film transfers are also cost-effective for small and medium print runs, making it the go-to choice for quick turnaround, custom or one-off orders.
